» High Mechanical Stiffness
Modern linear guide technology, pre-loaded ball screws and advanced software compensation ensures high displacement precision

» Wide Speed Range
Standard Model: 0.01-1016 mm/min (0.0004-40 in/min)
High Speed Model: 0.01-2032 mm/min (0.0004-80 in/min)

» Exceptional Load Accuracy
Load accuracy of +/- 0.5% down to 1% of load cell value provides a high dynamic range, thereby reducing the number of load cells required to cover the full force range

» Large Work Area
150 mm throat depth for larger specimens and wide range of work tables for flexibility

» Flexible Controls
Scalable from stand alone operation using a control console or utilising our highly acclaimed NEXYGENPlus software

» Control Interface
PC interface is via USB allowing standard laptops to be used with no special PC interface cards required

» Advanced Test Setup with NEXYGENPlus
The Windows® compatible NEXYGENPlus software features an improved and intuitive User Configurable Test functionality complementing the comprehensive test standards library available

The LS5 is a 5 kN / 1124 lbf high precision material testing machine that combined with our extensive range of grips, fixtures, extensometers and software creates a powerful material testing system. The system is equally suited to quality control, educational and R&D environments within a wide range of applications and test types, including medical devices, plastics, packaging, textiles, rubber and electronics to name a few.

- Meets or exceeds national and international material test standards
- Intuitive operation and low maintenance
- Small tabletop footprint with a large and flexible work space
- Plug ‘n’ Play, automatic identification of YLC series load cells
- NEXYGENPlus provides seamless data transfer to Microsoft Office®, LIMS and other data management systems

Test Types
Tensile Testing • Compression Testing • Flexural Testing • Friction • Insertion/Extraction • Peeling • Tearing • Creep/Relaxation
NEXYGEN™

PLUS

NEXYGENPlus material testing software is the hub of the Lloyd Instruments material testing system. This extraordinarily easy to use and flexible software, allows the operator to control and monitor all aspects of the system from a single front end, ensuring fast, reliable and powerful testing and data analysis for tensile, compression, peel, creep, fricti, on, relaxation and flexural test applications.

• Large built-in library of test methods meeting international test standards
• Intuitive User Configurable Test facility
• Video and still capture for visual analysis
• Built in SPC functionality for continuous monitoring of process parameters such as Cp and Cpk
• Microsoft Office® integration for seamless transfer of data to familiar Windows® packages, Windows® compatible
• Versatile data export facility to LIMS, SPC or data management systems
• Test automation and batch testing

Multi-lingual

NEXYGENPlus software is available in the following languages:
English ● Spanish ● French ● German ● Italian ● Danish ● Turkish ● Chinese ● Russian ● Polish

Test Creation

Getting started with NEXYGENPlus is simple, thanks to:

• An extensive built-in library of test methods covering ASTM, DIN, EN, ISO and other standards
• Test wizards for tension, compression, tearing, peeling, friction and flexural tests
• The User Configurable Test facility, ideal for product and component testing, R&D use and specialised testing

New User Configurable Test

The new User Configurable Test enables users to quickly build advanced multi-stage test routines using simple built-in commands.

Video and Still Picture Capture

Whether for advanced sample failure analysis or presentation of test results, video and stills capture is a feature unique to NEXYGENPlus. Video and/or still pictures can be replayed or shown at specific points during the test in the graphical display. To utilise these powerful features simply connect your web cam or analogue video camera to your PC.

Test Automation and Customisation

To facilitate the increasing use of automation in manufacturing, NEXYGENPlus has been developed with powerful utilities for systems integration. Typical integration projects include:

• Automated sample handling
• In-line testing
• Monitoring of parameters from other sensors, e.g. thermocouples and strain gauges
• Customisation of the user interface and other functionality via the integrated Microsoft VBA module
Grips and Fixtures

Choose from a wide range of standard grips and fixtures as well as custom designed versions.
- Wedge action grips for rigid samples
- Pneumatic action grips for faster sample clamping
- Vice action grips for film and semi rigid materials
- Compression platens available in many sizes
- 3 and 4 point bending jigs
- Self tightening grips to reduce operator fatigue
- Bollard grips for wire and rope testing

Extensometers

Lloyd has a complete range of contact and non-contact extensometers available.
- General Purpose Contacting Extensometers
- Non-Contacting Extensometer
- High Resolution Strain Gauge Extensometer
- High Resolution Non-Contacting Video Extensometer

The LS5 accepts up to 3 external inputs using an external interface. As standard the LS5 accepts one extensometer input using a cable loom.

Load Cells

The machine uses Plug’n’Play YLC Series load cells. The load cells feature anti-rotation collars to avoid load train twist and facilitating easy axial alignment. 8 interchangeable YLC load cells are available with different load ratings and resolution.

Flexible and Safe Work Area

The machine can be equipped with an expanded work table, a T-slot table or a drip tray. For safety splinter shields with electrical interlocks are available in three different heights. Furthermore temperature chambers can be integrated for your testing needs.

High Speed Testing

The LS5HS high speed model allows closer real life simulation in high speed force measurement applications. It also improves test throughput due to the high return speed of 2032 mm/min (80 in/min).

AMETEK Sensors, Test & Calibration
A business unit of AMETEK Measurement & Calibration Technologies offering the following industry leading brands for test instrumentation.

Chatillon Force Measurement
Chatillon has been a hallmark in the industry since 1835. The hand held gauges and motorized testers have earned their reputation for quality, reliability and accuracy and they represent the de facto standard for force measurement.

Lloyd Instruments
Materials Testing Solutions
Materials testing machines and software from Lloyd Instruments guarantee the highest level of performance and capability for production testing, quality control, laboratory testing, research and education to provide expert materials testing solutions.

Texture Analysers
The comprehensive program provides the platform to perform rapid, general food testing and detailed texture analysis on a diverse range of foods.

Newage Testing Instruments
Newage offers a comprehensive range of hardness testers, optical systems and software for measurement, data acquisition and analysis.
